“TRUE FREEDOM IS
OBTAINED THROUGH PASSION
AND DEDICATION.”

The manufacture of “Designa Individual” was established by 2 jewelry artists / designers from Belgium. The brothers decided to combine modern technology with the art of jewelry to start working on the design of unique accessories. DiW values are based on commitment and true passion towards mechanical and handcrafted art.

The company’s head-office is based in Germany, renowned worldwide as a manufacturer of custom luxury watches for very important people.

Mastering the art of working with high-end composite materials, the carbon fiber series is the highlight of each collection.

5

DESIGN A
INDIVIDUAL
WATCHES

INNOVATION

We mastered our craft, constantly working and experimenting with high-end composite materials. One of them, is carbon fiber. We keep tradition on the inside, but constantly develop new innovative approaches to create exclusive timepieces that hold an enterily different concept from the outside.

THE CONCEPT BEHIND HIGH-TECH MATERIALS

THE DIAL

Modern technologies and years of experience allow us to craft not only full carbon fiber dials, but indices as well.

THE CASE

The case is crafted in full Carbon fiber, which is incredibly light and resistant.

THE BEZEL

A full high-end carbon fiber bezel is achieved through hours of machine working and hand finishing.

THE STRAP

A meticulous handmade nylon-nato strap is meant to fit the style of the whole concept, as the comfort is second to none.

THE EXTERIOR

Not only we provide an exciting customization experience on the timepiece, but also on its “house”.

Each timepiece comes in a fine black wooden box with velvet on the inside. Opening it, will fill you with the most fascinating emotions.

THE DAYTONA

We all know how iconic some pieces are. As we do not intend to break any traditions, we aim to take them into a different level.

The Carbon Daytona project was the one that started it all. It was a challenge that needed to be accepted in order to cross the line of the unobtainable.

The Carbon Daytona is the lightest ever crafted. Its overall weight was just about 50 grams. A remarkable achievement, indeed. Each design is unique and holds a very special value to its owner.

Thanks to technological advancement and the admirable passion of the best craftsmen, it was possible to provide the very first “transformation” of one of the most iconic timepieces. Now expanding the model line with different high-end composite materials.

4130

The caliber 4130 is the iconic heart of the Daytona. It is a chronograph with fewer internal parts than others, thus, increasing its reliability.

This movement provides a 72-hour power reserve and allows you to keep track of time with an incredibly accuracy of $-2/+2$ seconds a day.

DRIVEN BY PASSION

We keep our meticulous approach hidden from most, however, the outcome of the most exclusive customization services is what provides most of the bright emotions in the end.

It takes a lot of dedication, time and passion in order to be able to meet all of the aesthetic and technical requirements we establish for every of our works.

As our world is constantly changing, so is our craft, keeping exclusivity and producing only a very limited amount of timepieces.

MATERIALS

High-end composite materials are the key in order to provide a unique and different experience. Their properties are second to none, as they provide outstanding durability, while being incredibly light.

Constant innovation allow us to keep improving the external and internal properties of the materials, also allowing high-end finishing like never seen before.

A SYMPHONY OF STYLE

As we celebrate this unique fusion of talent and vision, DiW stands at the dawn of new horizons, eager to embrace fresh collaborations. We invite visionaries, dreamers, and artisans to join us in our journey, crafting not just watches, but legacies. Let's weave new stories together, stories where imagination meets craftsmanship, creating timeless pieces that resonate with the soul of innovation and passion.

DIW X LEANDRO PAREDES

DEDICATION

Passion and dedication are mutual feelings needed to provide a unique and personalized experience.

Attention to details allow us to master our craft and exceed any expectation set for a certain project. Most of the job is handled by the hands of our craftsmen, and require extensive experience and knowledge.

The outcome of any of our projects is a unique masterpiece crafted upon request specifically for you.

THE AP VOIDLINE SERIES

In the pursuit of excellence, we embarked on a journey into the void. The Voidline series represents the apex of our craftsmanship, designed to challenge the boundaries of customization. Drawing inspiration from the very essence of nothingness, each piece is born from the void, embodying the perfect union of high-end carbon fiber technology and timeless design.

The Voidline is more than just a collection — it's a manifestation of relentless precision, bringing together the unparalleled strength of carbon fiber and the unmistakable design language of the Royal Oak. Each timepiece is a testament to the untold hours of labor, the mastery of materials, and the refinement of techniques that have been perfected over generations.

Ref. 15500

Every project in the Voidline collection is distinct, yet they all share the same DNA of superior craftsmanship and innovation. From the fiery essence of the Royal Oak Ember to the cool tranquility of the Royal Oak Aqua, these timepieces capture the elements in their rawest forms. With the Speedster's precision and the Spyder's adrenaline-fueled energy, this collection is crafted for those who dare to explore the edges of what is possible.
